Test I: Name: $\qquad$
In the next 15 minutes you must slove and anser all the below questions below. Each question is desined to test you knowldege of the real wurld and see if you know your PHyisc stuff. Reach each question and all responses very thoroughly. Think about each anser very carefully. Put all your ansers in the space(s) provided to you; anything outside fo the anser space will not be accepted. If you have a question, all you have to do is rase your hand. (I can't tell you the anser though!) Work hard and have phun! Remember, "Physics is Pfun!!!" -- each problem is worth 5 points!!!!!

Problems: (show all work to receive some credit)

1. A rock is released in a drop tower, essentially a chamber that has had most of the air evacuated from it, which is quite high. The rock hits the bottom and the sound of impact is heard 3.23 seconds later. How high is the drop tower?
2. An echo is heard reflecting off a distant hillside 1.4 seconds after the initial cry. If the speed of sound is $330 \mathrm{~m} / \mathrm{s}$, how far away is the hillside?
a) 120 m
b) 230 m
c) 460 m
d) Insufficient data to produce a anser.
e) None of the above responses is anywheres near to the correct one.
3. Explain why heavy things fall just as fast as lite things (indentically sized balls of steel and rubber), all things being equal:
4. The $\qquad$ is 0.61 times the size of the $\qquad$ .
5. Circle the correct answer: A rock is released from rest 10 m above the ground. How fast does it hit the ground assuming negliible air resistance? Hint: see the formulas.
a) $9.3 \mathrm{~m} / \mathrm{s}$
b) $11.2 \mathrm{~m} / \mathrm{s}$
c) $15.5 \mathrm{~m} / \mathrm{s}$
d) $16.8 \mathrm{~m} / \mathrm{s}$
e) Impossible to say given only this information.

True/False: All things fall at the same rate near the surface of the earth.T/F
6. When I say that $g=-9.8 \mathrm{~m} / \mathrm{s}^{2}$, what do I mean? $\qquad$
7. A ball is tossed up into the air. At the top of its arch it has a velocity of $9.81 \mathrm{~m} / \mathrm{s}^{2}$. If the rock is 5 m up at this time, how fast will it impact the ground? (Show all work to get any credit.) Hint: v = at
a) $3.4 \mathrm{~m} / \mathrm{s}$
b) $3.4 \mathrm{~m} / \mathrm{s}$
c) $3.4 \mathrm{~m} / \mathrm{s}^{2}$
d) 0
e) none of the above
7. What are the colors on "Big Ben's" clock face on page 32 of the text?
a) red and black
b) red and white
c) black and white
d) black and yellow
e) none of the above
8. In the table at the end of these here exam questions, what is the speed of the mouse at a time when $t=3.0$ seconds? $\qquad$ $\mathrm{cm} / \mathrm{sec}$
9. Use trigonometry to solve this problem: A tree is observed at a 30 degree almucantar. If you are 35 m from the tree, how high is the tree? Show all work to get any credit.
10. Essay question: Why does matter have affinity for other matter?
11. A tug-of-war has one team pulling to the left with 1800 N of force. The other team pulls to the right with a force of 1900 N . The rope can withstand 2200 N of force. What is the result?
a) The rope moves to the left.
b) The rope moves to the right.
c) The rope breaks.
d) Misleading - Such a situation is impossible.
12. A car uniformly accelerates to a speed of $30 \mathrm{~m} / \mathrm{s}$ in 15 seconds. What is the average speed of the vehicle over this inverval?
a) $2 \mathrm{~m} / \mathrm{s}$
b) $15 \mathrm{~m} / \mathrm{s}$
c) $30 \mathrm{~m} / \mathrm{s}$
d) $450 \mathrm{~m} / \mathrm{s}$
e) None of the above responses is anywhere near correct.
13. Write a brief essay about the meaning of velocity.
14. What is the mass of a 100 lb . person stnading on the moon?
a) 3.1 slugs
b) 45.5 kg
c) none of the above are correct ansers
d) both of the above are correct answers
15. If a car takes 10 seconds to go 100 m , what is its velocity?
a) $10 \mathrm{~m} / \mathrm{s}$
b) $20 \mathrm{~m} / \mathrm{s}$
c) $100 \mathrm{~m} / \mathrm{s}$
d) None of the above is a correct response.
e) Impossible to say given only this information.
formulas:
$\mathrm{d}=\mathrm{v}($ bar $) \mathrm{t} \quad \mathrm{vf}^{2}-\mathrm{v}_{\mathrm{o}}{ }^{2}=2 \mathrm{ax} \quad \mathrm{d}=0.5$ at 2
$\operatorname{tam}(0)=$ opp $/$ adj $\quad G=9.81 \mathrm{~m} / \mathrm{s}^{2} \mathrm{x}^{*} \mathrm{x}+\mathrm{y}^{*} \mathrm{y}=\mathrm{z}^{*} \mathrm{z}$
