## UNIT II: Worksheet 3

1. Robin, roller skating down a marked sidewalk, was observed to be at the following positions at the times listed below:

| $\mathrm{t}(\mathrm{s})$ | $\mathrm{x}(\mathrm{m})$ |
| :---: | :---: |
| 0.0 | 10.0 |
| 1.0 | 12.0 |
| 2.0 | 14.0 |
| 5.0 | 20.0 |
| 8.0 | 26.0 |
| 10.0 | 30.0 |

a. Plot a position vs. time graph for the skater.
b. How far from the starting point was he at $\mathrm{t}=6 \mathrm{~s}$ ? How do you know?
c. Write a mathematical model to describe the curve in (a).
d. Was his speed constant over the entire interval? How do you know?
2. The following data were obtained for a second trial:

| $\mathrm{t}(\mathrm{s})$ | $\mathrm{x}(\mathrm{m})$ |
| :---: | :---: |
| 0.0 | 4.0 |
| 2.0 | 10.0 |
| 4.0 | 16.0 |
| 6.0 | 22.0 |
| 8.0 | 28.0 |
| 10.0 | 34.0 |

a. Plot the position vs. time graph for the skater.
b. How far from the starting point was he at $\mathrm{t}=5 \mathrm{~s}$ ? How do you know?
c. Was his speed constant? If so, what was it?
d. In the first trial the skater was further along at 2 s than he was in the second trial. Does this mean that he was going faster? Explain your answer.
3. Suppose now that our skater was observed in a third trial. The following data were obtained:

| $\mathrm{t}(\mathrm{s})$ | $\mathrm{x}(\mathrm{m})$ |
| :---: | :---: |
| 0.0 | 0.0 |
| 2.0 | 6.0 |
| 4.0 | 12.0 |
| 6.0 | 12.0 |
| 8.0 | 8.0 |
| 10.0 | 4.0 |
| 12.0 | 0.0 |

a. Plot the position vs. time graph for the skater.
b. What do you think is happening during the time interval: $t=4 s$ to $t=6 s$ ? How do you know?
c. What do you think is happening during the time interval: $t=6 s$ to $t=12 s$ ? How do you know?
d. Determine the skater's average speed from $t=0 s$ to $t=12 s$.
e. Determine the skater's average velocity from $t=0$ s to $t=12 \mathrm{~s}$.
